

Titan: MRPII-Manufacturing Resource Planning

The Titan Manufacturing Resource Planning keeps production moving by putting managers in control of materials requirements planning by providing accurate and timely data. Keep production moving, minimize safety stock, improve customer service with INTRIX MRP.

Feature Summary:

- Central or separate planning for multiple plants
- Actual as well as simulated plan
- Fully pegged forecasting and master production schedule (MPS)
- Two-level MPS for assemble-to-order manufacturers
- Ability to copy the entire forecast or sales orders to MPS Rate-based MPS for repetitive manufacturers
- Net change as well as full regeneration capability
- User-definable planning horizon
- Rough-cut as well as detailed capacity requirements planning
- Strong data retrieval capabilities provide a "microscope" into the realm of planning/shop floor data, e.g. detailed pegging inquiries
- Integrated with Inventory, Bill of Material and Routing, Continuous Flow and Production Activity Control modules
- Fully integrated with the INTRIX line of accounting, manufacturing and distribution software modules

Strong data retrieval capabilities and an integrated tool set add to the power of the application.

Utilizes the PROGRESS-4GL RDBMS technology. Source code is available.
