

Titan: Payroll

Titan Payroll is a fully-functional stand alone or integrated module designed to automate the payroll process for all types of business.

The Titan Payroll module automatically calculates proper withholding for state, federal, and other payroll deductions. In addition, the system provides employees with year to date totals for all withholdings and earning categories. INTRIX Payroll works with the entire line of Titan state-of-the-art INTRIX Accounting, Distribution, Manufacturing and Retail Point-of-Sale modules. Written in PROGRESS-4GL, Payroll runs on any UNIX, XENIX, VMS or DOS Computer System.

Written in an advanced Fourth Generation programming language, PROGRESS-4GL, Titan Payroll System is a powerful and flexible system for managing and analyzing your bottom line.

Payroll System is one of thirteen Titan accounting, inventory management and manufacturing modules from INTRIX SYSTEMS GROUP, a market leader in quality, innovative UNIX software solutions and support services worldwide.

Titan Payroll System includes a powerful "Progressive Windows" feature, with which users can access related files from other Titan modules. This feature greatly increases the integration of the modules and provides faster access to information.

Feature Summary:

- **Maintain Security and Confidentiality.** By automating routine functions, a clerk can handle the majority of payroll related data entry without having access to sensitive information. Protect executive payroll information by creating a special controlling entity that would be accessible only to appropriate personnel. Password driven security systems make sure that only authorized personnel have access to sensitive information and functions.
- **Reduce Errors.** By providing various totals at different levels, exception cases can be easily identified and cross-footed to catch errors before checks are cut. The system provides checkpoints in the payroll process so that the check run can be reviewed and corrected if necessary. Interfacing to the General Ledger and automatic posting result in greater accuracy and time savings. The system automates events that might easily be overlooked including month, quarter, and year-end procedures, vacation and holiday allowance exceptions, quarterly additions and deductions and carry forward of missed additions and/or deductions.
- **Reduce Costs.** Save Payroll expense with streamlined data entry with "alpha search" facility and comprehensive default settings. Eliminate service bureau

charges. Automatic posting to related Titan Modules, i.e. General Ledger, saves time and money.

- Improve Management Control. Provide timely and accurate information as a result of "on-line" processing. Relational Database Technology makes it easy to produce customized management reports with "Executive Reporter", Titan's ad hoc report writer. Detail and summary cost information makes it easy to ensure accurate cost distributions.

Strong data retrieval capabilities and an integrated tool set add to the power of the application.

Utilizes the PROGRESS-4GL RDBMS technology. Source code available.
